hmm – that might do it in a running stream -- have you considered asking the local authority to do a sample test?  
Say you have seen some unusual algal blooms in warm weather or some such <g> They can be fairly paranoid about water quality !!!

Contacting the authorities might not be a good choice. I dabble in politics and have some political goals. Smiting the locals in a farm community would be rather counter productive. Besides, almost everyone on the council has farm interests. My family has farm interests! Yes, I know its a sell out, but that is politics. And it is killing our rivers! Something must be done, but on a national level. Ooopss, sorry did not mean to get going on this subject..we were talking about non-swimming ducks.. ;|

hmm – I thought successful local politics was about screwing all sides while not being seen to !

<g>

Water quality is an important local issue.

How about a general sampling of all fresh water around the parish just as a local ecological project to see how wonderful the water is !!!! <bright innocent smile>

How about trying a floating decoy?

hmm – interesting idea!

thanks

Re: Non swimming ducks

There are some very lifelike decoys on the market, some swim, quack, and they are poop-less too (oh, that's another thread).

LOL
