My Partridge Rock hen disappeared last week. I figured something ate her, but she came running out of woods this morning when I opened the pin to let the others out of the coup. I was pleasantly surprised.

I had something similar happen with a Barred Rock a while back, but it was obvious something had attacked her and dragged her off, luckily she was able to escape.

Has anyone else had a hen go on vacation for a week then return almost a week later?

Nicholas
