ups.com:

Interesting as mine have leg mites, too and the vaseline treatments have not really worked.

try baby oil on the legs & keep reapplying it at least weekly. also clean the barn, especially around the perches & spray with an oil based spray, concentrating on the undersides of perches, & the walls around the perches (especially cracks) lee

Using White spirit before applying the oil on the legs is much more effective – the white spirit gets up into the scales and gets the mites the vaseline smothers anything that moves down the leg and helps to recondition the scales
