Prof.Tobias<http://allserv.rug.ac.be/~mvaneech/outthere.htm>

You have the audacity to direct us to a another personal opinion web
page of "My ideas"??

??

You're crazy.

My little boy, just read
PV Tobias 1998
"Water and human evolution"
Out There 3:38-44

Sigh.

A secondary source from a guy who's first
language is probably not English for a opinion of what he thought
Tobias said? You are a joke Verhaegen.

Re: Bipedal P & G

^{3?} if ever our earliest ancestors were savannah dwellers, we must have been the worst, the most profligate urinators there²

Re: Bipedal P & G

stupid too
answer.
Just listen
to what
"real" PAs
have to say
on the
subject:

Tobias 1995... thanks for the ancient history
lesson.

Yes, why don't you try something up-to-date like Roche et
al.
(1999)
and Semaw (2000) for some real evidence, your tired old
spiritual-
phenomenon imagination evidence is pathetic.

Gona = 2.6 mya = core tools = cut-marked antelope bones =
meat
eating
= smart brains = ostrich eggs = land tortoise = savanna =
NULL
hypothesis until someone proves different. Imaginary
scenarios that
make up evidence, such as utilization of algae that doesn't
exist, is
pseudo-science.

<snip pseudo-scientists who think lions were making the
stone tools
found on the savanna.>- Hide quoted text -
