This was about the human urinary system, which comparative data show is incompatible with a savanna past, but some savanna fool snipped all relevant parts & introduced some blabla:

"Here's a point to consider when evaluating AAT. I did not learn this point from some academic overlord with an anti–AAT agenda; I learned it while trying to avoid becoming crocodile food in Africa.

What, my little child, have crocs to do with AAT??

Stupid doughboy, crocs eat babies that swim in the water. Ever see the photo on that Yahoo wet ape forum?

And what have crocs to do with that??

My little boy, why don't you inform a little bit before opening your big mouth??

Are you really too stupid, Olson, to know the difference between an apith & a Homo??

(Yes, you are: savanna believers simply lack common sense...)
