You are not understanding it at all, LMAO. Let me see if I can have a go at
this.

– the darkness of your skin and therefore how

> *much melanin you have is determined by intake of sunlight, which
> depends on the environment you're in,*

That's true of all races. Right now, I'm VERY dark – due to being at the
beach almost every day in tropical Florida here. But that will FADE as soon
as I'm no longer in the sun.

Africans have very dark skin

> *because they are exposed to a great deal of sunlight in their
> environment,*

But they don't fade when they stay out of the sun – they might be a bit

lighter, but they are still quite brown – and a different shade of brown than people from India – noticeably different.

the human body needs a certain amount of sunlight but too
