Did I say "language is random"? Read again.

If that means anything, it sounds as if you're begging the question again.

Read again above. It sounds like you have not even heard of chance resemblance.

A triple non-sequitur with back flip. What can I do but applaud?

I might be

Wait! Hold that thought! You may have just discovered chance resemblance!

however

- > *I picked about >1/2 of the name places and showed they could*
- > *easily fit into the Japanese named place repertoire (not*
- > *implying that these words came from Japan) so this is not a*
- > *simple instance of a couple 'random' events.*

No, it's an example of a dozen or so random events. After you've discovered chance resemblance, the next thing to discover is how common it is. Check out the discussion with Yuri for the url of a lovely world gazetteer which will find multiple instances of the same place name all over the world.

Yes, it is

As you wish, but I don't know what you think is my "prejudice". Surely you're not going all Yuranoid and thinking I'm "prejudiced against Native Americans" or something?
