Dear Reader's

I will jump in this age old debate and say this, I will worship ANYONES god the day he ,she or it is powerful enough to gets it message heard around the world Instantly. Some religions are 2000 years old now and they are still tring to get their message out. Too bad there were no Fax Machines or Newspapers or the Jewish population

Re: Atheists dying

might have heard the good news. Perhaps our Moslem and Hindu friends might have had something in common with us? Basically what I'm saying is If (general figures-) 1/3 of the world is hindu and another 1/3 is Moslem and the remainig 1/3 is christan and the divding lines are mostly acient geography :So one's god needs a bigger megaphone or perhaps that cell phone? If you just created the world it should not have been so big that you could not communicate with it. It would seem those moutians were a bit too high.

WHY? are there many populations that worship the sun? They are spread out all around the globe and seemed to have a common experience (watching the Sun) and developed common worship ideals ignorant of one another. A common experience =a common god. That is pretty impressive ignorance. If AllAh, or Rod Parsley were the one the annointed one I would expect them to be able to heard in every way possible and be just as obvious , everyone on earth (with respect to the blind) should be able to see god like they see the sun and the moon.

It is interesting to note Gay, Lesbian, And Transgendered and bi sexual populations also are all over the globe and share the same Rainbow flag despite their many religions and cultures. Shouldn't god be able to unite the people as easily as this ? They say the Coke Logo is the most known item on earth, perhaps religions need a new Add Agency or a product worth "buying".

Rich
