-- Erik makes a good point!

"Bilge" is so conditioned to give his Gods
credit for all good things,
that he completely misses the fact,
that technology is constantly advancing
with numerous tiny steps, in numerous areas,
and that models follow, rather than lead technology,
and that the best models are computer algorithms,
with logical control loops , feedback and data statements,
and are NOT open loop, complex, non-cost-effective sky models.
