We know that the Cimbrer tribe from Jutland together with the Teutones made it down in Europe and during the war against the Roman Army under Maurius first major fight was in Noricum(Austria) the Cimbrer army won the fight in Orange 105 BC but lost finally against Maurius in Vercelli (Northern Italy) 101 BC. Plinus, Ptolemy and Tacitus speaks of them in respect.

The thing I would like to know more about is if anyone knows of proof for the assumption made by several scholars during the years that the reason for the Cimbrian movement southward in Europe can be found in a sudden rise in waterlevels which made part of Jutland hard to live in. I have read many theories but not been able to find any proofs one way or an other while reading them. Do anyone of you know anything or have a ref to a work or an excavation from period 150-100 BC which speaks for or against the waterlevel theory.
