From that somewhat incoherent and indignant spew I note the following:

Your only idea of of suitable work for you is teaching social science or History to 4th to 9th grade students in an elementary school in the area where you currently live.

You don't feel qualified to do much of anything else, apparently.

Well, I guess that is a fair assessment. I guess you can read (sort of), so you are no worse qualified to stand up and regurgitate what a more qualified individual has written in a not too detailed book intended for 10–16 year olds than any random adult that has finished elementary school herself or himself.

You do not have the qualifications to become a *good* teacher, but I guess the kids can survive with a barely adequate teacher too.

You are certainly not qualified in any field of work that demands clear thinking and good communication skills, ie any kind of scientific endeavor or any kind of research.

But you apparently realize that in real life. So how come you are still nursing your fantasies about being a great scientist on the Internet ?

Grin,
Stein
