A lesson on the Usenet, for Dr. Marcel Rochaix www.ekbt-law.ch

I give private lessons for a relief organization (for free, although I am living most modestly – so very modestly nobody of you would believe it and hold it as possible). Just now I am teaching mathematics to a woman who suffers from dyscalculia. We are mostly playing, calculating without actually calculating, thus developing new ways of learning and teaching mathematics. The local universities recognize no necessity for such new ways, despite the drastic decline of the Swiss public schools. But my relief organization does, and encourages me. The woman I am teaching now is eagerly participating, and although she goes

twelve minus one equals one

she knows more about mathematics than Dr. iur. Marcel Rochaix, expert on computer law in Europe, knows about the Usenet.

If he published his indictment paper against me online, people would ROFL (any idea what that means, Dr. Marcel Rochaix?) and call him a KOOK (you know what *_that_* means, at least in terms of money) for having not the faintest notion of the Usenet, and a rather dubious one on the Web (taking 18,700 entries on the Phaistos Disk for as many articles by as many authors).

If Dr. Marcel Rochaix weren't up to ruin my bare existence I had pity for him, and if he should believe to be the lawyer of a honorable scholar, professional mathematician and member of the Linguistic Society of Paris, not knowing that he actually supports grapheus – well, in that case I already pity him, and for free. Picture yourself as a hopeful and still relatively young lawyer, expert on computer law in Europe. Would you like to bust your career by becoming the lawyer of grapheus?

sci.archaeology: Re: Marie Jean Faucounau sues me for at least 8,487 Swiss Francs

Well, I better give Dr. Rochaix a lesson on the Usenet.

The Usenet is an open medium. Everybody can publish in the unmoderated scientific groups and participate in the ensuing discussions. However, that freedom has a price: one has to fight if one comes up with new ideas, insights, approaches, theses, or even theories (if a thesis can be compared with a piece of wood, a theory would correspond to a piece of furniture; theses and theories are often confounded, even by edus).

The Usenet is the Wild Wild West sector of the World Wide Web. People are continually shooting at each other, and the most priceworth
