If this is an example of your critical thinking skills, your suspicions aren't very useful. Given the 17mpg increase, assuming that similar miles are travelled by both vehicles, I suspect that your suspicions are mildly askew. AFA plastics go, I think most tree-huggers look at plastics as a mixed blessing, since some types of plastic are not commonly or efficiently recycled, but those that can, make a significant impact. I have worked for two manufacturers of recycled paper products,

and they also make a profound impact on the cost of packaging and use of virgin pulp. I don't know what the preponderance of the vehicles mpg out at, but if the range *were* toward the 34mpg and above (I have no idea of where it actually lies), that would be represent significant saving in terms of barrels used.

I have a 5/8 ton Suburban (400+CID) that I use to haul my houseboat (35hp johnson), so I do recognize the necessity of fuel hogs when it is warranted, but would like to spend less overall on my fuel usage, which is why I have two Elantras (current mpg status not calculated, but you can bet the comparison between them and the Suburban is staggering). Nobody wants to ski behind a houseboat, so it does everything I need from it for much less, actually a good skier could get up behind it, if they were that bored. I also recognize the alpha male sensation you (okay most people) get from driving a big truck, but a punk bitch in a monster truck is still a punk bitch, and not necessarily safer, either.

They don't like guns, so the ryou have it -- we win again. We won 2000 and 2002 and 2004 and will win 2006 and 2008.*

>

Once again, I suspect that your suspicions are somewhat awry, perhaps you don't realize that most 'eco' types are more outdoorsy than you or I, well maybe not me since I hunted/fished/hiked/camped throughout my youth. The no-guns argument carries some weight, but the unibomber was more of a luddite than most earth-worshipping queers are, and there have been showdowns between ecos and industrial entities that involved guns, with both sides having resorted to violence.

I won't speculate on your election predictions, you must be right *sometimes* to be able to justify your suspicions.
