Of course both of you are wrong, All viking paraphenalia were made by native americans in Minnesota and Vancouver island and imported.

Given the speed of [or lack thereof] the imports they were force to use hats with cow horns and mushrooms. This proved to be effective at night because the invaded thought they be stampeded by a herd of sea cows.

This all ended with the Phonecians living on the Azore immigrated first to Ireland, finding the people their chattering with american natives in Ogham script they immigrated to borish Linkoping, established Linchpin University and taught the Norse how to bake clams. After which they could trade clam shells with the New World Native for a faster trade of swords, the natives were big collectors of clam shells for reasons only known to gotlandic Templar. The trade further evolved when they learned how to make clam chowder in a kettle, which got wild and this was a sought after technology in the new world. The Wild Kettle trade increased the level of sword and axe production. This worked well until late 1360s when the ice advanced and the little green pygmies living at the north pole, under the instructions of King Arthur traveled across the ice and disrupted the trade in favor of British pirates. Having secured iceland the British and the Pygmies burned all the known maps to the new world except frauds and fakes so that only member of the Sinclair family, who had

Re: Viking swords made by Germans

ties to King Arthur via the great great great great grand father of his 2nd wifes third cousin sister's best friend. The map they used is on the roof of a secret vault under the stone floor of the rossyln chaple and can only be view by entering a long secret passage from the Orkney islands under the north seas to Scotland and under the chaple, the same tunnel goes also to Bergen and to the King's Lynn in England. This is how the Sinclair brought about the downfall of the Haakon realm, by throwing plague infested rats into the tunnel after laying down a trail of cheese. Not to mention the secret tunnels of the illuminati where the treasures of the holy land are all stored. However this is not the same tunnel used by Egyptian aliens that built the pyramids, they of course have a tunnel going from the Olmec kingdom to the north pole, where down a long magnetic shaft there is the inner earth where exists a switch where gravity can be turned off and so 60 ton stones can be moved by tidal motion in the mediterranean sea.

You can identify the magnetic post by the Ogham script on the side of the mountain, the translation reads. "Please save energy, turn off switch before leaving, thank you, MBA management". It was later learned from translating double dotted runes on northern canadian islands that MBA stands for Megalith Building Aliens. There is also instruction manual for how to operate the earth, it includes things like 'making longitude lines show with a sun compass', 'how to make currents converge from all directions', 'How to turn a waterfall into a ship channel', and 'how to redirect sea ice flows to open up channels in an ice age'. Unfortunately it was stolen by the sole norske traveler who explored all of the North (his name was Nicholas, but he was later beatified) and now is possessed by a member of the Linchpin Alumni Association who is dyslexic in 'alien' and therefore is revealing its secrets in an unfathable code that sounds like nonsense. That explains how the Norse in britain got their weapons, Any questions?
