The most relevant fact to the discussion is the first fact, what evidence can be drawn from observing pyramid blocks suggests they were poured and not carved as all other experts believe.

Correction: Most stones constituting the pyramids are carved and comes from the quarries located nearby on the giza plateau. No doubt about that. But the stones forming the outer and inner casing are casted as shown by their microstructure analysis.

Barsoum speculates that the inner top of the pyramid is also casted (so that a simple low ramp was used). But that part is just speculation.

You never addressed this question, ergo you aren't much of skeptic. You seem to like pyramid schemes though.

Really? I did present the evidence from Barsoum's paper that the binder of the analyzed samples is not natural in
<1hpx387.1pvd54wf07mzpN%firstname@xxxxxxxxxxxxx>.

How did you missed those few lines from my previous post?
May be an alien put its tentacles on your eyes while you were reading this post :-)))
