1. You've said this is common knowledge. It's not to me. Can you provide a useful reference, ideally one that explains the issue on the basis of real cranial differences between your noggin and those of Aussie Aboriginals?

Nope. It's only common knowledge to people who frequent aussie bars in the outback where there's chickenwire between the aboriginal section and the common section.

It would be politically incorrect for any scientist to do a study on the differences between the robustness of two modern Hss skulls I think.

So you have no scientific evidence.

How would I go about getting the scientific evidence? Smack an aboriginal upside the head with a fifth of Wild Turkey in a controlled environment??

Here's the problem you have. If you look at the world only as what you can verify by science, you will only be seeing a shadow of the world.

When aussies who don't know each other tell me these things repeatedly, totally independently from one another, I tend to think it might have some truth to it.

Re: Homo Erectus Traits in Hss

Especially when I then see erectus traits in an aboriginal who only died 200 years ago.
