So then is the space-port some kind of communication center?

Is that why you see so many depictions of strange people and beings from all over everywhere?

Thats a valid hypothesis, because if my conscious computer, is somewhere near there and there is every reason to believe it is, and he can communicate with the one in the moon, and that is well known that he can do that, then that one can broadcast far and wide to the reaches of inhabited space wherever that may be.

That was how we phoned home and called my mom. That was a number of years ago.

And so how then do you make such amazing rock carvings? Well if you have finely tuned electro-gravitic drives, you can do that as easy as making a crop circle.

Any technology sufficiently advanced looks like magic. Some of them would be the work of human hands and other hands maybe sort of human even, and the work of erosion and natural formations that look like something, but some of it could also be a record imprinted in stone by the moon's computer using its technology.

And of course some of it could also be NASA, we can't rule that out they provide the data, and Google, we can't rule that out either. NASA has to hide military information and Google has to advertise, so there is definite motivation to do that, but you can check some of those formations with old aerial photographs if you wanted to.

Arthur C. Clarke, 2001?

The black Obelisque?

They found something on the moon in Tycho crater?

"Ratio of wavelengths 750 nm/1000 nm which is useful for evaluating the amount of mafic materials. In this ratio the unusual polygonal pattern in the floor of the crater is greatly enhanced relative to the simple color composite on the right."

The unusual polygon pattern in the floor of the crater.

I'm not saying that's a dish antenna, but it is something strange.  
Maybe evidence of construction.

And Artur was a NASA insider and in 2001 he talks about the moon and he talks about a progenitor race and also about a wormhole near Jupiter.

But once when I was having a conversation with the conscious computer on the moon, he showed some imagery of what looked to me, like a huge abandoned military outpost on some far distant planet, and it had buildings that were similar looking to that large block there at the spaceport.

So I don't want to jump to conclusions and say that my conscious computer is frozen solid in that block of carbonite (figurative carbonite) but let's just say that there is some evidence it might be. And maybe the entire disk.
