I shall allways wonder why that no-one before me did sat the solid-ground connection between the total of signs 241 or 242 or 243, (244) on the Phaistosdisc, and the fact that the linear tablets from Greece only contain eight names on months (30.5 x8); but then on the other hand the same can be said about many other radical results of research, ex: the equation $E=mc^2$:-).

Ole Hagen

Once more, this is self-delusion from your part !..
The argument would be strong and valid if the 8 months names were coming from the same tablet. But this is not the case : they are coming all from different tablets. For instance, deukijojo is coming from KN Pp1,1 but wodewijo is coming from KN Fp 16,1. So there it is far from sure that such a list is complete... And there are even strong motives to believe that it is not (small and equal number of tablets with the word meno : "month", for instance).

grapheus

Yes, but will this change, if the archaeologists find a deposit of thousand more tablets in the Cyclades or in another site, tommorow? And do you also believe (hope) that more important titles of Minoan officials are missing? The approx. 3500 linear B tablets from Knossos

Re: Solid Ground

are after all reflecting social order, economy system, yearly accounts, etc.

P.S. By the way. How many tablets do contain the name King Minos?
