Thanks for the replies.

The allotment is on land which used to belong to a country estate, although the surrounding area is London suburbs. I would say this land was farmed and then turned over to allotments, and would never have been filled. There's loads of this type of flint round here, so it's probably local.

I was digging a planting trench so didn't stop at the time to photo the exact spot. The interesting thing is that I was double digging which means you go right down to the sub-soil which is usually relatively undisturbed.

Is an ecofact a naturally occurring oddity?

That's it exactly.

You appear to have a talent for this stuff! Stick around, we could use real discussion of archaeological stuff.

And with an interested and intelligent learner, there are many here more than willing to teach.

.
