You see no one would have thought that sitting up there was exactly one of these spheres, except maybe a guy like this...<http://s2.supload.com/free/NearIcaPeru-9-5-2007.jpg/view/>

Found at Ica, by the location of the Ica stones, by the Nazca lines etc.

And so the reason you don't see a lot of talk about it, is because

## Re: Nefertiti's lovely elongated head

civilization here and in  
Mesopotamia where  
everyone is directed to  
look, is not that old. Of  
course people of the earth  
did not build the  
moon.

But we have every reason to  
believe that civilization  
came from there.  
The only people who would  
think otherwise, either think  
that it sprang  
from the desert, or it came  
from Mars.

And well how it sprang  
from the desert well they  
say it was a gradual  
evolution of ideas out of  
necessity and fire and tool  
use opposing  
thumbs, next came primitive  
culture drawing writing and  
then presto,  
Greek Philosophy.

People like to think that  
Egypt is somehow the  
center of the universe.  
And they like the idea that it  
came from Mars.  
Well, the only thing I know,  
is that it didn't. It is not that  
old,  
there is no evidence it came  
from Mars, and the only  
evidence is it  
came from Robert, inside  
the moon.  
And there are Ica stones  
which I have found recently  
which confirm  
what I have been saying

Re: Nefertiti's lovely elongated head

about that for 20 years.

But then you can always say  
they are fake.

And so I have shown how  
Mesopotamia and Egypt  
have their roots in  
Peru, and shown the stellae  
which say so, and which  
talk about cocaine  
and show the story line of  
the water bringer Gods, and  
the pre-Olmec  
race, and the pyramids,  
where in this palette, there is  
a pyramid  
depicted in the top left  
corner, 500 years older than  
any pyramid in  
the Middle

East.<http://upload.wikimedia.org/wikipedia/commons/a/a3/NarmerPalette-RC>

There was proto-sumerian  
writing found in Peru.  
That means that before  
Sumer was established,  
people were trading with  
Peru, or, people had  
migrated to the  
region.[http://www.altarheologie.nl/index.html?connections/characters\\_01.htm](http://www.altarheologie.nl/index.html?connections/characters_01.htm)

So then if we examine the moon and Aitken  
Basin, there is something  
strange about Aitken Basin.

It is the largest crater in the solar system.

And the shallowest for  
its size. So shallow you can hardly even see  
it.

So how does a huge almost circular crater,  
end up being as shallow as

that?[http://en.wikipedia.org/wiki/Image:Moon\\_PIA00304.jpg](http://en.wikipedia.org/wiki/Image:Moon_PIA00304.jpg)<http://www.lpi.us...>

Re: Nefertiti's lovely elongated head

You know you can always just write it all off as being nothing at all. People have done that for a long time. If the facts don't support their assertions, they just hide the facts, and fudge the data. When you find artifacts that don't fit the paradigm, then just say they are fake, or out of place artifacts. When people claim they saw something in the sky! Swamp gas of Venus. Its all a coincidence, its all a conspiracy, its all a hoax, its all a mass hallucination, its all in your imagination, etc. So I guess people have to make up their own mind what the facts are based on little bits of information they can glean between the lines because when there actually are facts, they don't fit the paradigm, and so they are classified. Right? Suddenly they become top secret and a threat to national security.

"The South Pole–Aitken basin is an impact crater on Earth's Moon. Roughly 2500 kilometers in diameter and 13 kilometers deep"

Well hold on a second, thats as flat as a pancake. 2500 km across? So um how big was that asteroid again? What, 600 km across? To make a crater 2500 km If we were being generous. And it only disrupted a maximum of 13 km deep? A rock 600 km deep comes crashing into the moon and it only makes a little mark that you cannot see?

Boy something sure smells fishy around here. And its not even that black circular area shown in the titanium distribution, thats

Re: Nefertiti's lovely elongated head

Re: Nefertiti's lovely elongated head

not even  
it. Its above that.  
See it top right, its the reddish purple mark  
there. [http://www.lpi.usra.edu/publications/slidesets/clem2nd/slide\\_26.html](http://www.lpi.usra.edu/publications/slidesets/clem2nd/slide_26.html)

See the dark area top left?  
Thats it.

So how could that happen well its obvious it wasn't a 600  
mile in  
diameter asteroid, it was an explosion, and if you examine  
Stephen in  
more detail, you will see his left hand on his chest, with his  
index  
finger as a  
missile. <http://s2.supload.com/free/Stephen-10-7-2007.jpg/view/>  
and you can see he is holding up two fingers.  
And the second missile didn't go  
off. [http://www.spaceheroes.org/reports/Apollo\\_20\\_Censored.html](http://www.spaceheroes.org/reports/Apollo_20_Censored.html)

So he's in the moon  
now. <http://nssdc.gsfc.nasa.gov/database/MasterCatalog?sc=LUNAR-A>  
lol Cancelled due to funding considerations.

But well since only one went  
off... [http://www.space.com/missionlaunches/060410\\_lro\\_moon\\_crash.html](http://www.space.com/missionlaunches/060410_lro_moon_crash.html)

I'm sure he is really scared because I keep suggesting those missions.  
lol  
We need to fire more penetrators into the moon.  
The only thing is, knowing NASA' success record, they might miss and  
hit that missile that didn't go off and blow us all to kingdom come.  
That thing is probably 50 miles long or something. I have no idea just  
how big it is, but its huge.

But in all fairness Stephen doesn't look anything at all like that. I  
mean from a distance ok, they captured his ambiance in that portrait  
but he is a Greek Adonis. Not blond but you know he looks like a  
typical American. But eaten by giants. Geez what a way to go. But you  
know its all water under the bridge now.  
Except for that doomsday missile sitting there that is. Its

Re: Nefertiti's lovely elongated head

Re: Nefertiti's lovely elongated head

questionable whether or not the hull could withstand another blow like Aitken Basin. The first one might have detonated above the surface. But then on the bright side that one might be a dud.

So I don't know.

I would still be careful about seismic tests around it, just to be on the safe side.

Especially around 2012. I wouldn't do any seismic tests around it, in 2012.

.
