Wiltshire Mystery Ruined

Salisbury Plain overlies a very large Coalfield, unfortunately too deep to mine economically.

Dr. Garry Denke (1622–1699)
Hidden Energy Amalgamate Theory
The Coal Stones and The Healing Stones

Stonehenge Mining College
The First Borean University

- a) Irish Sea Glacier dumps black Volcanic Bluestone rock erratics at Seven Sisters in centre of South Wales Coalfield faulted Oval of Horseshoes.
- b) Black Ordovician Bluestone rock mysteriously does not produce fire like plentiful ordinary black Carboniferous Coal rock at circling rim of fires.
- c) Homo sapiens begin worshipping the rare black Volcanic Bluestone rock power over fire at the South Wales Coalfield faulted Horseshoes Oval.
- d) Preseli Hills springs of black Ordovician Bluestone rock that create water found being the internal reason for mysterious power over fire.
- e) Superstitions springing up from powerful black Volcanic Bluestone rock that soothes Coalfire burn wounds with water it creates fuel myths.
- f) Cold lower-class Homo sapiens having to stoke wood fires throughout night desire Hot upper-class Homo sapiens living style of sleeping all night.
- g) Pembrokeshire Coalfield -> South Wales Coalfield -> Bristol Coalfield -> Salisbury Plain Coal Prospect generated by cold lower-class geologists.
- h) Elders attribute multiple failures at Salisbury Plain Coal Prospect to absence of The Healing Stones' power at the centre of duster digging area.
- i) Pigskin leather football (rugby) and lambskin leather volleyball (soccer) geology student falls on field seeing "white stone" younger creatures.
- j) Upper-class Homo sapiens agree to lend The Healing Stones that are in their Horseshoes brought by the Irish to lower-class Homo sapiens neighbors.
- k) Parents' students bring tons of "white stone" from South Wales Coalfield Oval to palaeontology department with deflated pigskins and lambskins.
- l) 19–18–19 recalcitrant elders 'space'-out '56 basinward Carboniferous Coal rim cave chimneys – cave vents for "white smoke stone" comparison.
- m) Field rim '56 cave chimneys filled and excess "white stone" piled toward first 3 pine marked dusters styling Pembrokeshire Coalfield outcrop.
- n) Structural geology of the South Wales Coalfield is conveyed in each Q and R hole pair separated by thrust trench in the Double

Re: Stonehenge Coal Trend

Horseshoe model.

- o) The Green sparkling Cosheston watered Irish delivered Old Red erratic Seven Sisters' beacons rock entrance keeping the way of the 3 of pine.
- p) Heal stone problem, water problem, burn problem, class problem, etc with The Healing Stones' delivery to Coal Prospect duster area made.
- q) With newest version of 'net' available College volleyball grows in popularity and "Laws of the Game" for football and rugby are now changed.
- r) Elders attribute continuing Salisbury Plain Coal Prospect failures to centre disconnection with Stonehenge Bottom spring at northeast valley.
- s) Q and R holes thrust The Healing Stones having no power of creating Coal or water and remaining '56 chimney "white stone" packed at thrust.
- t) Lower-class Homo sapiens' black Volcanic Bluestone rock loan agreement honoured and return made to Seven Sisters as deeper shoring fails.
- u) Geologists locate 'higher education' rock nearby and recalcitrant '56 convince orthodox elders 'capping graduates' in pairs makes for success.
- v) College teaches upper-class Homo sapiens' minimalist logo architecture at its sophisticated best and The Healing Stones a gift back donation.
- w) Ezekiels whirl Borean wind Wheels north for Pagans, Druids, and Wiccans tunnel Deals shoeing The Healing Stones' Seven Sisters' Spirits.
- x) Tunnel Engineer I. Kingdom Brunel (1806–1859) and Mining Engineer William Gowland (1842–1922) ancestors College the 3 shoring of tunnels.
- y) Pagans, Druids, and Wiccans build 30 Y holes fence for 'roped-out' tourists caught climbing rim perimeter bracing and inside mine shoring.
- z) Borean University entrance at gap 29 Z holes fence for 'roped-in' tourists observing Stonehenge Mining College in action on the Ancient path.

Palynology is geology,
flowers flourish Twice.

Carboniferous Whitestone

The Healing Stones' Q and R holes are features of similar shape and identical filling, each pair connected by a trench, resulting in a 'dumb-bell' shaped feature. After removal of Volcanic Bluestone from Q and R holes, the center part of each 'dumb-bell' was filled with very tightly packed clean Carboniferous Whitestone chalky rubble, the remaining primary fill of the original 'dumb-bell' from '56 holes

Re: Stonehenge Coal Trend

(Hawley Holes / Aubrey Holes). The expanded Q and R holes' ends of each 'dumb-bell' shaped feature were then backfilled with dirtier Cretaceous White Chalk from '01 ditch (Altar Stone Ditch / Heel Stone Ditch). The Healing Stones' clean Carboniferous Whitestone filled Q and R holes' trench was auger cored in '56 by Doctor Dentist Garry Denke (1622–1699) as confirmed in '01 by Mining Engineer William Gowland (1842–1922) around mine Stone '56.

The Ancient was Right !
Coal IS under that hill !
