*>No, because 99.99% of attendees at star parties are decent, upright  
>people who do not engage in such immature conduct.*

As with most equipment, operating it safely requires an operator who understands the safety issues and is committed to using the equipment in a safe manner.

In the laboratory environment, this means training and certification. In a public setting, I would think that simply requiring anyone using a laser to sign a statement that included some basic safety information and limitations on the use of the laser. It could be part of the sign up paper work.
