This model has three USB 1.1 ports, alas. In my response to Ioannis, I suggest getting a PCMCIA card that provides USB 2.0 ports. Unfortunately, most of these do need external power, in the form of an adapter that comes with the card. The Belkin is an example of one of these.

The D-Link (I \*think\*) is one that doesn't come with an adapter, but it won't support some devices that require the extra power.
