To Tim

You have disgraced yourselves by giving yourselves choices that you do not have, there is only one value for axial rotation as an independent motion and the sidereal value is not it, no matter how many times it is astronomically justified in going to support Newtonian ballistics applied to planetary motion.

<http://hypertextbook.com/facts/1999/JennyChen.shtml>

Those statements about axial rotation/sidereal justification from that website are similar in content to a flat Earth or a creationist Earth, you may not care to hear it but that is exactly what your reasoning amounts to. Again, the Earth is turning and you are turning with it and I strongly suggest you treat that motion as an independent motion rather than the sidereal monstrosity based on a 4 year and 1 day calendrically combined axial and orbital average.

You have absolutely no idea what damage has been done in ways that have spread beyond astronomy.

.
