Hi Guys,

I am ditching my 3.1Mp Kodak digicam. The longest night exposure it can take is 4 seconds.

I am looking at 5-6Mp digicams capable of longer exposures. I am looking at doing afocal imaging but you can also tell me of your experience with digital SLRs. D-SLRs are probably out of my budget. Is it better to go for an x3 or optical zoom?

Most grateful in advance.

Pierre MK-UK-

Cannon 300 D 6.3 megPix is a good one, SLR style, removable lens, bulb setting etc...

Used cameras going for \$500-\$600 on Ebay!
