Hi everyone,

I have recently developed an interest in astronomical photography. However, I am at a loss as to the instruments that I should get. I have been going through eBay and saw quite a few listings. For example:

http://cgi.ebay.de/1400-150-Seben-6-Telescope-with-Automatic-Motor-Drive_W00QitemZ7547543041QQcategory

I was wondering if some of the more experienced folks would recommend something like this for a beginner.

I would also really appreciate it if someone could point me to some good resource for beginners. The information out there is so overwhelming and I was wondering what you guys think is a good starting resource. I live near the alps and can hardly wait to get out there and explore the night sky.

Thanks and cheers,
xargy
