I have owned LXD55, LXD75, LXD650, and LXD750 mounts in addition to a Losmandy G11. Then I bought a Tak EM11 which is an EM 10 upgraded with more or bigger bearings. I wish I'd just spent the money a long time ago and been done with it. The Tak is expensive but carries 25 + lbs and will still take a 15 min CCD Inmage with almost perfect stars. I am getting ready to sell the EM 11 as I just bought a EM 200.  
Buy My TAK, you'll be glad you did, Bill

Rory Deol wrote:

Hi I have only ever owned dobs and I want to get an GEM telescope but I ideally would like to get one with a mount that I can use for different OTA's. If I do this with the LXD75/55 would I be limited to Meade scopes and with the CG5 would I only use Celestrons, and what is the EM10 like? Basically I want to buy a scope and mount but would like the option to upgrade to a better scope in the future (the one I get now will be relatively inexpensive) without having to buy a completely new mount. Is that too much to ask? The above mounts come with the scopes that I am looking at, which one would be best? Is there a great deal of difference between them?  
Any info would be great, thanks.
