Hello. I hope it's ok to post this in here, sorry if not. We have a freeware high-definition, VR panorama of 'Rub al Khali' on Mars, taken by the Rover Opportunity. It's an amazing 360-degree picture, and our new VR algorithm rotates it slowly on the desktop in high resolution, but without the jagged edges, and stays sharp even at 1920x1200.

It's free without any spyware/adware, nag screens, or limitations. I'd just love to get your opinion on it. It's a freeware version of our larger program that has more Panoramas.

It's located at [www.19thparallel.com/rubalkhali.zip](http://www.19thparallel.com/rubalkhali.zip). It's about 3.5 Megabytes.

The main page is at [www.19thparallel.com](http://www.19thparallel.com), and it has the descriptions and thumbnails of the other panoramas. I'd really be interested in what other panoramas you think would be interesting. We have panoramas from the Moon and Mars currently, but there are many more than can be added later.

Thanks,

Rob
