Hi Martin,

Thanks for the offer of help. Are the photos the same as those for version 2.76 or from different sources?

Regards,
Dan

A few years ago I used Carte du Ciel and there were images that could be pulled up when zooming in on certain objects. I've just downloaded it and don't see that feature anymore. Is there a catalogue I need to download?

The latest version of CDC offers a package of thousands of FITS images of most every object of interest up there. As one zooms in, the FITS of the galaxy or nebula or cluster, etc. get larger and larger. It is GREAT! Go here to find links to download this latest version of CDC and the FITS catalog (labeled "Pictures" in the list of downloadable files:

http://sourceforge.net/project/showfiles.php?group_id=64092

If you have any questions about how to upload and activate the FITS catalog into this latest version of Cartes du Ciel, I will be glad to help.
