Thank God!

Actual astronomy rather than fights over Vietnam or other crap that belongs on the political lists.

THANKS!

(and it is a very enjoyable read!)

I couldn't agree more. My son and I battled the mosquitoes and clouds for a couple of hours last night, and observed some of the planetary nebulas you mention, as well as some other stuff, with our 10" f/6 dob. PNs (as well as Uranus and Neptune) are fun to hunt down – looking for stars that don't quite look like stars. Thanks for inspiring us to get out on a less than perfect night!

Dennis
