How much more noise would you guess the K100D have compared to the D50?
Twice as much?

One can always stack images, even non dslr can be usable.

I looked at a K100D DF. It has less noise than an Ist DS2 but more than a D50. I don't think the K100D is a good choice for astrophotography. Pentax seems to have implemented the amplifier in a much more noisy way than Nikon or Minolta.

cheers

Duncan
