Hello,

I opened a site to present this theory at <http://www.magneticgalaxy.com> visit from time to time to see how it progress.

The Big Bang theory, dark matter and dark energy could be replaced with a simple theory based on magnetic fields in the galaxy. The article below contradicts the usual explanation for the sun energy source as a fusion reactor and suggests that the sun is heated by magnetic fields from the Galactic center.

The main points of this theory are as follows:

1. The sun energy source is from magnetic fields from the galactic center.
2. The heat from the magnetic fields leads to high energy collision between particle in the sun core that creates new particle and increase the sun mass.
3. All the stars in the galaxy create new mass so the total mass and the size of the galaxy is increasing.
4. The stars in the galaxy eject dust that freefall to the galactic center super massive black hole. Thorough the dynamo effect the potential energy of the dust is converted to magnetic fields.
5. As the galaxy mass and size increase, distance arm of the galaxy is detached form the main galaxy to create a new galaxy.
6. Galaxies spawn new galaxies and the total number of galaxies in the universe increase.
7. The universe expands and accelerates from the increase in the number of the galaxies.
8. The Big Bang cosmological model is replaced by a new cosmological model that resembles the steady state theory.

The solar cycle is a striking evidence for this theory. Every 11 years the sun is changing the direction of its dipole magnetic field. The current solar model assume incorrectly that the change of the magnetic fields is coming from inside the sun, but it is not, it is coming from

The galaxy is a zero point machine producing mass, energy and spawns new galaxies from vacuum energy.

the galactic center and it supply energy that heat the sun. The magnetic fields from the galactic center reach the sun not directly but through magnetic eddies in the galactic disk.

The article could be found here:

<http://www.magneticgalaxy.com/sun.pdf>

<http://www.pixelphase.com/sun/sun.pdf>

http://www.philica.com/display_article.php?article_id=65

The article is also in the following newsgroups:

Alt.binaries.astronomy

Alt.binaries.pictures.astronomy

Its title is:

The sun energy source is not nuclear fusion, but magnetic fields from the center of the Galaxy. The sun converts energy to mass and not mass to energy.

Abstract:

The sun energy source thought to be a nuclear fusion reactor inside the sun core. The sun is not heated by fusion reaction but by magnetic fields coming from the galactic center. The nuclear fusion is a by product of the magnetic fields heating. The changing magnetic fields from the galactic center induce electric currents inside the sun that heat the sun. The heat and the high kinetic energy of particles in the sun core, trigger high energy collisions that create the main constituents of matter, electron, proton and neutron. The collisions also fuse or nucleosynthesis heavier elements like deuterium, tritium, helium and lithium. This leads to the fact that the stars and galaxies constantly produce mass and energy. The article will explain the clockworks behinds the galaxies energy production. The galaxy energy and mass production cancel out the Big Bang theory and leads to a steady state cosmological model with large amount of new mass created that expand and accelerate the universe.

Regards,

Dan Bar-Zohar
