I have personal experience with a Quicksilver G4 that eats optical and hard drives like crazy, compared to my PCs,

I am surprised here. My 2002 Quicksilver G 4 733 (the so called \*server\*) purrs like no tomorrow, and the 533's work great. The G 4 400's tho seem to want to eat logic boards. Well two out of five of them so far.

I have bought a bunch of G 4's, and handed them out to neighbors and friends as an easy box to get on the net with. Works like a charm.....  
Never paid more than \$100 for one off of craigslist.

My watercooled over clocked pc (I call it the power station) is for nothing but online gaming.

Oh, and running my idea of an almost perfect OS, Linux 8-)
