Sidewalk Astronomy[www.sidewalkastronomy.info](http://www.sidewalkastronomy.info)  
AD World<http://www.adworld.netfirms.com/>

"May 19th wasn't selected by accident. On that night the twins of Gemini will appear to stand above the western horizon for Northern Hemisphere observers, and the Moon and Venus – just 2° apart – will adorn the waist of Gemini's western twin Castor. Saturn gives the constellation Leo a bright beige nose all night long, and Jupiter will appear late and stay low in the southern sky for those in mid- to high-northern latitudes. "

Unapologetic astrologers with telescopes passing themselves off as astronomers'.

I leave you to this mockery of a rich Western astronomical tradition for your photographic/magnification exercise,if the joys of the true astronomical insights were not so rich and so magnificent I would not come here day in and day out trying to get others to share that Western heritage and to stop it lapsing into a celestial sphere peep show.

Not one single person,not one individua here I has ever objected to the situation where so much is destroyed for so little,as you go to your 'star parties' and rob celestial arena of its scale and magnificense through a puny optical exercise,the works of the great structural and timekeeping astonomers remains in ruins for your lazy hobby.
