*

* Twenty-four hours a day, messages were flowing in non-stop. This instantly posed an enormous problem in handling the inundation of information.

*

* Two of the senior cyberneticians organized a filtration system.

The feedback was not simply machine throughput rates, but also---via the central computer---a system 'through which anyone could consult anyone else'.

I used keyword monitoring to filter "information" from "noise" in Salomon's HUGE email traffic. What I did, of course, was small potatoes; what Stafford Beer did was a serious cybernetic attempt to control an entire nation's economy.

In order for him to do that, he needed to set up a (cybernetic) monitoring infrastructure.

The nation's banks, factories and industrial companies.

It would have given Allende maximum control over the nations industrial infrastructure, real-time monitoring of everything.

Everything had a computer monitoring it.

*

* McNamara's revolution built on an idea that was central to operations research and propounded by many nuclear strategists, that war was not methodologically distinguishable from economics. The process whereby you analyzed, managed, and controlled an economy was not essentially different from the way you managed a war, except that one was an economy of pro
