YOu might want to go for a bit more magnification and a larger aperture -- look at the Action 10X50.

I have a pair of Action 10X50 and a pair of Nikon Monarch ATB 10x42 -- the Action binos are larger and heavier and I tend to use the ATB's because they are lighter and more compact.

Many folks can't hold 10x binos steady. My advice is to try them out at night, or be prepared to mount them.

Dennis
