Thank for your wise help and wisdom.
And getting me off the hook about cleaning the mirror. (grin)
Mark

Thanks for your help with my question about my new scope.

So I have played with my 10" hardin now for a few nights.
I have a few obserations.

1. The X2 barlow may work on the moon but make mars look blurry.
2. It looks like there is a light coating or haze on the primary mirror 10" and none on my old 4.5 does the 10" need cleaning?
3. Rotaion bearing way to easy— i will need to put felt down to stop this.
4. Does a 2" plossl do more for viewing then a 1.25. Is it worth the upgrade for a backyard duffus like me.

PS this is the kit the scope came with — Celestron #94304. It is OK or junk?
