OK while I respect privacy,

And I respect freedom of speech,

However.....

If I were a company like Google, I could simply enforce the security responsibility that comes from monitoring the data passing through one of my servers. Looking for viruses and whatnot, not to mention I would have bought and maintained, not to mention provided access through said servers to someone like yourself. AND paid the bandwidth fees that come with said access.

Privacy.....

From "Whom" exacty.....

You said your mom could do a search and find your chats.....

DID your mom do a search and find your chats, or maybe your girl/boyfriend, or you husband, or wife?

So now its Googles fault your homelife sucks.....

If your standing on a street corner and your planning with your friend about robbing the bank across the street, and a cop walks by, waits for you to act, arrests you and says in court that he overheard you on the street and that tipped him off. Is the case thrown out because the cop violated your "privacy"

It does not matter where you go, what you do, where you chat or with whom.....Theres an old saying and it goes like this.

"If you dont want something heard, then dont say it."

Everything that is said here is public.....

Re: Dear Google

Now think about the industry.....

I am willing to bet you ANY amount of money that your activities are much more closely monitored than you think.....

I used to work in the industry, every internet service provider has a "caching" server used to speed up access to their customers most actively used webpages.....that's part of the network structure, and your NOT changing it. Without it, load times would be a lot longer than they are.

Bet you didn't think of THAT huh.

Deal with your punishment, and remember, next time don't be stupid and say something you don't want heard.
