Turn your faces to the ground on Nov 8th or make the effort to recover the two greatest achievements of Western astronomy, the heliocentric system and how it was figured out and the timekeeping adaption to axial rotation at 15 degrees per hour and 24 hours/360 degrees in total. You insult the great Western astronomical tradition for so long yet in a few hours on a November day, the fleeting motion of a tiny planet makes a mockery of your Newtonian indoctrination, which denies that orbital motions are seen directly from Earth.

You do not insult me, you insult yourselves.
