Thang about "learned" folk?...(aside from always tellin ya to RTFM?) they hate to have to see someone else learn sumthin more better er simpler than they did.

Colin!...Imagine your hovering high above the Earths equator...k?(notice that the Earth spins by from left to right)(cause the sun rises in the East)... now advance yerself north along an arch til yers above the north pole....you'll see a counterclockwise rotation

....and hey pot smoking is great for geometrical imagining.....

Says The Shloe

If I were looking at the earth in such a way that I was looking straight down at the north pole, is the earth orbiting clockwise or counterclockwise around the sun? Are all the bodies orbiting the sun orbiting in the same direction?

Thanks,
Colin
