My English no work good today. How you call, measure tape that pulls and rolls back by itself. A string makes it pull, but one can pull out many meters, like 5 or 6 meters or more, then letting go it pulls back alone.

So anyway, imagine a spring that has a big heavy metal ball, and the metal ball pulls down but the string wants to pull it back up, but if we just leave it, the string is too weak. Nevertheless, the string can pull very strongly, especially when the ball drops, like a rubber, the string makes the metal ball go down and bounce back, to almost as high as where the ball started from.

However we connect this string to roll something as the ball drops,

Re: Perpetum mobile

and this rolling creates some electricity, a little, just enough
to
give a little pull to the ball coming up—ways. I know it
doesn't work,
but I imagined, that with each drop and bounce of the big
ball, the
top uses the collected electricity to move higher when the
ball is
bouncing upwards. So the ball is bouncing on a string, but the
thing
holding the top of the string moves the top of the string
higher. Also
one can coordinate that the moving up happens when the ball
is at the
bottom point, so this gives a pull to the ball, so it can bounce
higher. The ball could bounce forever. The string naturally
rolls up,
and with it rotates an electric thing that powers in and helps
pull
upwards with the collected energy by moving the top from
where it all
hangs higher.

You don't like this game.

Let's put it this way. You have like that long measuring tape that
pulls back.
You attach a ball, and it bounces down and back up. But when it goes
down,
the spinning naturally made electricity, but when it coming up,
helping with
that electricity to come back up to the hand a little stronger. And it
should smack
the palm. The ball is balanced when it hangs not close to the palm.

You don't like Italians. You stoopid, right?

You drop the ball in your hand, and it should come back and smack your
hand.
Then you drop it again.

You like American no flip flop bounce, but ball no spin around, only
a determined general in power not afraid to be American in war

Re: Perpetum mobile

Re: Perpetum mobile

and like war, like a President, your invention of a capitalist
military power, almost like the Soviets in propaganda, like Pinochet
in non-compomize, only military move forward, but never back.
