Re: Crazy humanity: war against crimes against humanity and racism – or racist monopoly

I remember my talk.

Make sure you tell the FBI.
I'm a cannibal. I eat people.
The only
reason
I eat HYOOOMANS,

He didn't go away and tried
to solve the hacking
intrusion for half an
hour.

He was looking at every
security detail while I kept
talking about the
horrors
sects can do.

I am a Cannibal, I eat people, and I want
world war. If you can't keep
me
out with all the newly hired security experts,
why don't you just go
home.

I am starting to remember.

If your security people can't protect this place from me, why
don't
you
just go home. He kept sending letters of a hacker.

You know the funny thing. I didn't hack in. I left a two
months old
connection
alive. It's complicated. I did nothing, but use their site's

Re: Crazy humanity: war against crimes against humanity and racism – or racist monopoly

features.
I never had
to use my Windows OS. When I left an old connection alive
for
chatting,
somehow all the security features didn't apply to that one
connection.
I figured it out at that moment of what was happening, that
they never
rebooted their server and the new server security tools didn't
block
an
already connected and live connection. I figured, the moment
I log
off,
there is no back in to speak with security. I held the
connection till
the
last moment of their security finding out what was
happening. They
hired
a very aggressive security after my first two attempts to speak
of
human
rights with them. They quit. Closed down the place. And I
was like,
is that possible? I wasn't expecting that. They had a monster
hacker
in
their minds, speaking horrors and blood of a cannibal who is
not a
human rights activist and wants world war.

They were an empire, they weren't just a sect. Their own tools they
built they couldn't trust no more and their own tools murdered them,
just that lack of knowledge and guessing in the non human domain
creates monstrocities in their minds. The word hacker, how it
threatens
them. Nothing else they fear more than a software engineer.

It is their domain that defines the world today. A cyber-terrorist in
all US dictionaries refers to hackers.

A real cyber-terrorist is just like a real terrorist who takes people
hostage,
threatens, and murders people viciously as terrorists online.

The global perception of what cyber is is completely deformed from

Re: Crazy humanity: war against crimes against humanity and racism – or racist monopoly
reality.

It is such people as them who are committing crimes of terrorist-
identity,
threat psychos online, Booglebushes. The world is not evolved.

However the UN perceives cyber terrorism differently already and
treats
it as real crimes as any other that correspond with crimes against
humanity
under true terroristic religious hatred and/or political
pervasiveness.

It is the way human rights operates. I would never write code to break
in anywhere but speak the truth on matters of human rights, but since
all perception is dilirious and not responsive, I say: I must be a
cannibal
who eats people and want world war. Americans buy such stories, and
so do hardline sects.
