Hi everyone!

I'm a student of biology at the Jagiellonian University, Krakow. Currently I'm taking part in some research projects (sex ratios in blue tits, sex determination in zebra finches...). But I'd like to do sth in the field of computer simulations of evolutionary processes. Could you help me to find some books/articles/web sites that would help to start with... I know some computer languages (c++, python) but I don't know how to use them in evolutionary simulations... Or better said – I'm not sure :)

I'd very grateful for any suggestions :)
