

Is "bilateria" monophyletic?

Source: <http://sci.tech--archive.net/Archive/sci.bio.evolution/2007-02/msg00009.html>

Someone in another newsgroup said he'd heard a theory that bilateralism had evolved more than once in different phyla. Is there any basis for that?

It led me to wonder, though; is Vernanimalcula supposed to be a prostome?
