Hi all,

any guru out there give me a quick comment on the concept of trying to cross-breed Cannabis (Sativa/Indica/Ruderalis) with either Hops (Humulus lupulus ?) or stinging nettles (Urtica dioica) ?

I don't know about stinging nettles, but the best way to mix hops and cannabis is to smoke the cannabis and drink beer.

Bear in mind that I can deal with geno and phenotypes, but start to lose it at mitosis ....

regards
