I have now uploaded the 14 chemical engineering PDF e-books to the "upload" folder FTP site operated on behalf of the forum

<http://www.sciencemadness.org/talk/>.

The FTP (broadband) is password-protected. To gain access to it, you have to register as a member of the forum, then seek out "Axehead", who operates the FTP, and message him through the forum site to ask him for a log-in name and password.

The file-names of the e-books, individually repacked as ZIP files with no password, include the year of publication., between the late 1960s and early 2000s. As uploaded, the files themselves are dated 30 July.
