You are brutal, dude, but lack the tact necessary to  
to bend me to your will :-)

I give you free info. You whine about it,  
make a disparaging remark about my life,  
tell me I don't know how to search Google,  
and then trash my 30 years of work by  
saying you don't think any of the 64  
properties of AS are useful.

You missed one.

-----  
\_PROPERTIES OF Ammonium Salicylate #65\_

When compounded with a proprietary formulation  
containing plutonium and traces of plaid lint,  
currently being investigated by the USPTO, DoD,  
The National Laboratory of Iraq, and other places,  
AS has the ability to confer invisibility to  
any object ert or inert, vegetable or mineral,  
male or female, and when used with a patent-  
pending electronic module, purchased separately,  
it also allows any treated thing to experience  
time travel.

-----  
Now \_that's\_ pretty damn useful, eh?

I don't fault you for missing this one since  
it's not been reported officially as of this time :-)

Mark (GOOGLE: salicylates properties ~18100 hits)
