Your use of punctuation above seems to indicate the test was the failure of science to re-create life in the lab, coupled with not being able to describe every step of evolution. If so this is not a test of ID. If that is not what you were implying, just what test has ID passed?

The ease which you are able to say that the accidental origin of life could be duplicated in the lab in no way means that the actual experiment is that easy. I can just as easily challenge you to prove god exists by saying it's easy, just go to the third heaven and knock on the door. The fact that you haven't done this easy thing means he doesn't exist. Or if you suscribe to the alien designer, just go to his home planet and ask him to come here to explain it all to us. The fact that you haven't done this easy thing means he doesn't exist, so ID is therefore disproved. Hey, this science thing is easier than i thought.
