OK, here's the best bit from that page for you:

"The emerging fields of nanoscience and nanoengineering are unfolding a new frontier in the science world with an unprecedented understanding and control over the fundamental building blocks of all physical matter. The finer and tinier a matter gets, the original surface area of the matter gets amplified nano times over, emitting its packed force in their equal folds. Here lies the nano,s mystery heretofore unknown but all of a sudden so powerfully impact upon us."

Now you've had the technology explained to you you're convinced, aren't you?
