- 

Hey

I'm looking for some information on Copper (II) Sulphate,  $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ .

I find it very difficult to track down any information on the crystal structure, the chemical bonds, the position of the crystal water and other such things.

Can anybody help me with a link or a book reference.

Anders Lund

First semester nanotechnology student at Aalborg University

Denmark

.
